C0. Introduction

C0.1

(C0.1) Give a general description and introduction to your organization.

Micron is a global leader in memory and storage solutions. With a relentless focus on our customers, technology leadership, manufacturing and operational excellence, Micron delivers a rich portfolio of high-performance DRAM, NAND and NOR memory and storage products. Every day, the innovations that our people create fuel the data economy, enabling advances in artificial intelligence (AI) and 5G applications that unleash opportunities — from the data center to the intelligent edge and across the client and mobile user experiences. Micron’s team members live our values: collaboration, customer focus, innovation, people and tenacity. We share a common goal to pursue technology and product innovation and manufacturing excellence for our customers, partners, communities and society. For nearly 45 years and with more than 52,000 patents granted (and growing), Micron has delivered products that have helped transform how the world uses information to enrich life for all.

Continuous improvement of our environmental performance is a long-term commitment and we take a proactive approach to environmental stewardship, occupational health and safety, and high-quality product standards. Compliance with applicable environmental regulations is considered a minimum standard and Micron implements additional programs where appropriate to provide greater environmental performance and protection. An integral part of this mission is Micron’s commitment to environmental compliance and protection that serves our team members, our customers and the communities in which we operate. Continuous improvement of our environmental performance is a long-term component of Micron’s business mission. Visit micron.com/sustainability for more information.

C0.2

(C0.2) State the start and end date of the year for which you are reporting data and indicate whether you will be providing emissions data for past reporting years.

**Reporting year**

**Start date**
January 1 2022

**End date**
December 31 2022

**Indicate if you are providing emissions data for past reporting years**

No

**Select the number of past reporting years you will be providing Scope 1 emissions data for**

<Not Applicable>

**Select the number of past reporting years you will be providing Scope 2 emissions data for**

<Not Applicable>

**Select the number of past reporting years you will be providing Scope 3 emissions data for**

<Not Applicable>

C0.3

(C0.3) Select the countries/areas in which you operate.

- China
- Japan
- Malaysia
- Singapore
- Taiwan, China
- United States of America

C0.4

(C0.4) Select the currency used for all financial information disclosed throughout your response.

USD

C0.5

(C0.5) Select the option that describes the reporting boundary for which climate-related impacts on your business are being reported. Note that this option should align with your chosen approach for consolidating your GHG inventory.

Operational control
(C0.8) Does your organization have an ISIN code or another unique identifier (e.g., Ticker, CUSIP, etc.)?

<table>
<thead>
<tr>
<th>Indicate whether you are able to provide a unique identifier for your organization</th>
<th>Provide your unique identifier</th>
</tr>
</thead>
<tbody>

</tr>
</tbody>
</table>

C1. Governance

C1.1

(C1.1) Is there board-level oversight of climate-related issues within your organization?

Yes

C1.1a

(C1.1a) Identify the position(s) (do not include any names) of the individual(s) on the board with responsibility for climate-related issues.

<table>
<thead>
<tr>
<th>Position of individual or committee</th>
<th>Responsibilities for climate-related issues</th>
</tr>
</thead>
<tbody>
<tr>
<td>Chief Executive Officer (CEO)</td>
<td>Micron’s CEO sits on the Board of Directors and has executive oversight of Micron’s sustainability efforts, including climate change.</td>
</tr>
<tr>
<td>Board-level committee</td>
<td>Members of the Board’s Governance and Sustainability Committee: The Governance and Sustainability Committee of Micron’s Board of Directors oversees the company’s development and integration of sustainability strategy and regularly reviews sustainability performance, including climate change, supported by other Board committees as needed.</td>
</tr>
<tr>
<td>Board-level committee</td>
<td>The Audit Committee of the Board of Directors regularly reviews reporting processes, as well as metrics and financial reporting aspects of climate change reporting.</td>
</tr>
<tr>
<td>Board-level committee</td>
<td>The Compensation Committee establishes operational metrics for evaluating performance in fiscal 2022, which includes performance on ESG issues including greenhouse gas (“GHG”) emissions.</td>
</tr>
</tbody>
</table>

C1.1b

(C1.1b) Provide further details on the board’s oversight of climate-related issues.

<table>
<thead>
<tr>
<th>Frequency with which climate-related issues are a scheduled agenda item</th>
<th>Governance mechanisms into which climate-related issues are integrated</th>
<th>Scope of board-level oversight</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scheduled – some meetings</td>
<td>Overseeing and guiding employee incentives, Reviewing and guiding strategy, Overseeing the setting of corporate targets, Monitoring progress towards corporate targets, Reviewing and guiding the risk management process</td>
<td>&lt;Not Applicable&gt;</td>
<td>Micron’s sustainability and climate-related strategy, action plans, performance objectives, and progress against goals and targets are presented to the Board’s Governance and Sustainability committee at least annually. Risk management policies and significant risk findings are reported to the Board’s Audit Committee. The Compensation Committee established operational metrics for evaluating performance in fiscal 2022, which includes performance on ESG issues including greenhouse gas (“GHG”) emissions,</td>
</tr>
</tbody>
</table>

C1.1d

(C1.1d) Does your organization have at least one board member with competence on climate-related issues?

<table>
<thead>
<tr>
<th>Board member(s) have competence on climate-related issues</th>
<th>Criteria used to assess competence of board member(s) on climate-related issues</th>
<th>Primary reason for no board-level competence on climate-related issues</th>
<th>Explain why your organization does not have at least one board member with competence on climate-related issues and any plans to address board-level competence in the future</th>
</tr>
</thead>
<tbody>
<tr>
<td>Not assessed</td>
<td>&lt;Not Applicable&gt;</td>
<td>&lt;Not Applicable&gt;</td>
<td>&lt;Not Applicable&gt;</td>
</tr>
</tbody>
</table>
(C1.2) Provide the highest management-level position(s) or committee(s) with responsibility for climate-related issues.

**Position or committee**
Other C-Suite Officer, please specify (Executive Vice President, Global Operations)

**Climate-related responsibilities of this position**
- Integrating climate-related issues into the strategy
- Setting climate-related corporate targets
- Monitoring progress against climate-related corporate targets

**Coverage of responsibilities**
- Not Applicable

**Reporting line**
CEO reporting line

**Frequency of reporting to the board on climate-related issues via this reporting line**
Annually

**Please explain**
Micron’s Executive Vice President, Global Operations maintains oversight, review, and approval of the company's operational strategy related to climate change, including setting and monitoring progress against climate-related targets in corporate operations. With company subject matter experts, the Executive Vice President leads review of strategy, targets and progress with the company board of directors at least annually.

---

(C1.3) Do you provide incentives for the management of climate-related issues, including the attainment of targets?

<table>
<thead>
<tr>
<th>Provide incentives for the management of climate-related issues</th>
<th>Comment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Row 1: Yes</td>
<td></td>
</tr>
</tbody>

(C1.3a)
(C1.3a) Provide further details on the incentives provided for the management of climate-related issues (do not include the names of individuals).

**Entitled to incentive**
Corporate executive team

**Type of incentive**
Monetary reward

**Incentive(s)**
Bonus - % of salary

**Performance indicator(s)**
Progress towards a climate-related target

**Incentive plan(s) this incentive is linked to**
Short-Term Incentive Plan

**Further details of incentive(s)**
10% of the company incentive (bonus) pay for Senior executives and all other employees is based on our sustainability performance. This includes achievement of steps to reduce greenhouse gas emissions.

**Explain how this incentive contributes to the implementation of your organization’s climate commitments and/or climate transition plan**
Our compensation philosophy for executive officers is based on the belief that the interests of our executives should be closely aligned with our long-term performance and sustainable value creation for our shareholders. To support this philosophy, a large portion of each executive officer’s target total direct compensation is “at risk” and linked to the accomplishment of specific financial and operational performance goals that we expect will lead to increased long-term value creation for our shareholders. The Compensation Committee chose these metrics and their linkage to our business and results of operations because they believe a focus on sustainability benefits our team members, communities, and other stakeholders.

### C2. Risks and opportunities

#### C2.1

**(C2.1) Does your organization have a process for identifying, assessing, and responding to climate-related risks and opportunities?**

Yes

#### C2.1a

**(C2.1a) How does your organization define short-, medium- and long-term time horizons?**

<table>
<thead>
<tr>
<th></th>

</tr>
</tbody>
</table>

#### C2.1b

**(C2.1b) How does your organization define substantive financial or strategic impact on your business?**

A substantive strategic impact on Micron’s business is one which directly and significantly affects the company’s markets or ability to manufacture its products. One indicator used to define substantive strategic impact is customer ratings of Micron performance, which frequently include climate change indicators.

### C2.2
(C2.2) Describe your process(es) for identifying, assessing and responding to climate-related risks and opportunities.

Value chain stage(s) covered
- Direct operations
- Upstream
- Downstream

Risk management process
- Integrated into multi-disciplinary company-wide risk management process

Frequency of assessment
- Annually

Time horizon(s) covered
- Short-term
- Medium-term
- Long-term

Description of process
Micron works to better understand and address sustainability and climate-related risks and opportunities through collaboration among our sustainability, environmental health and safety, and responsible sourcing programs, along with our various risk management organizations.

Current efforts include improving operational energy and water efficiency; working toward our long-term goals and targets for energy, emissions, water and waste; and monitoring regulatory, customer, investor and other stakeholder expectations.

Micron’s goal is to integrate risk management practices companywide to improve decision-making in governance, strategy, objective-setting and daily operations. We do this by providing tools and knowledge, facilitating open global communication and monitoring continuously. Micron has a network of risk management teams operating across the company, including in our environment health & safety (EHS), information technology (IT), business continuity, global quality management, and risk advisory services groups.

Our ERM organization accumulates key risk information from the executive risk committee, made up of select company executives, along with risk assessments performed by other teams. These results are regularly presented to the executive risk committee, the audit committee of the board of directors, and Micron’s full board of directors for consideration.

Climate-related risks and opportunities are identified and prioritized by EHS and Sustainability, considering criteria that include business continuity, impact to brand/reputation, relevance to regional operations, alignment with Micron business strategy, impact to communities, and compliance considerations. Micron routinely monitors greenhouse gas and energy efficiency regulations and policy to understand and evaluate impacts to, and opportunities for, our business, customers, and the communities where we operate.

In 2019, Micron completed a climate-related risk assessment, which included “business as usual” and 2-degree scenarios for 2020, 2030, and 2040. We conducted an initial updated assessment in 2022, and continue to review potential risks.

One example of our risk/opportunity identification and management process includes the risk of enhanced reporting obligations. The likelihood of this occurring and how impactful it would be without treatment is evaluated to determine the inherent risk and then treatment details, including who, what, and when are determined and tracked to closure. The treatment for this example includes monitoring greenhouse gas, energy efficiency and reporting regulations and policy to understand and evaluate impacts to, and opportunities for, our business, customers, and the communities where we operate. When applicability is determined, an action plan is developed and monitored through execution. Such an assessment is done annually (at a minimum; for example, reviewing sustainability reporting requirements and updated climate-related disclosure standards), and reviewed for short, medium, and potential long-term impact (for example, new ISSB S1 and S2 reporting standards have a potential short-to-medium-term impact).

C2.2a

(C2.2a) Which risk types are considered in your organization’s climate-related risk assessments?

<table>
<thead>
<tr>
<th>Risk Type</th>
<th>Risk Type</th>
<th>Relevance &amp; Inclusion</th>
<th>Please explain</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current regulation</td>
<td>Relevant, always included</td>
<td>Micron routinely monitors greenhouse gas and energy efficiency regulations and policy (such as carbon taxes) to understand and evaluate impacts to, and opportunities for, our business, customers, and the communities where we operate. This is managed through an enterprise-wide EHS data management system that identifies and monitors compliance with applicable regulations.</td>
<td></td>
</tr>
<tr>
<td>Emerging regulation</td>
<td>Relevant, always included</td>
<td>Our Global EHS &amp; Sustainability, Legal, Product Compliance, and Government Affairs organizations monitor emerging legislative and regulatory programs, such as carbon taxes and product energy efficiency regulations, on a global level to understand and evaluate impacts to, and opportunities for, our business, customers, and the communities where we operate.</td>
<td></td>
</tr>
<tr>
<td>Technology</td>
<td>Relevant, always included</td>
<td>Micron low power devices support sustainability and climate change initiatives in our customers’ supply chain. Failure to meet such customer specifications might contribute to reduced demand for products.</td>
<td></td>
</tr>
<tr>
<td>Legal</td>
<td>Relevant, always included</td>
<td>Micron routinely monitors legal requirements related to greenhouse gases (such as legal limits or reporting requirements), energy efficiency regulations, and other issues to understand and evaluate impacts to, and opportunities for, our business, customers, and the communities where we operate. This is managed through an enterprise-wide EHS data management system that identifies and monitors compliance with applicable regulations.</td>
<td></td>
</tr>
<tr>
<td>Market</td>
<td>Relevant, always included</td>
<td>Micron routinely monitors market trends and customer demand related to improved product power consumption and greenhouse gas performance to understand and evaluate impacts to our business and our customers and ensure that we continue to address customer expectations and win business.</td>
<td></td>
</tr>
<tr>
<td>Reputation</td>
<td>Relevant, always included</td>
<td>Micron’s performance on climate change may affect the company’s reputation. We take our reputation with local communities, our employees, regulators and customers very seriously and reputational consideration is incorporated into our risk criteria.</td>
<td></td>
</tr>
<tr>
<td>Acute physical</td>
<td>Relevant, always included</td>
<td>Micron considers risks arising from extreme weather events, such as cyclones, hurricanes, or floods in our business continuity program. These risks may increase as a result of climate change.</td>
<td></td>
</tr>
<tr>
<td>Chronic physical</td>
<td>Relevant, always included</td>
<td>Micron includes chronic issue impacts on our facilities (such as availability of water), workforce (such as health and productivity), and communities such as sea level rise, increased temperatures, and changes in water availability in our risk assessments.</td>
<td></td>

**Primary potential financial impact**

Increased direct costs

**Climate risk type mapped to traditional financial services industry risk classification**

<Not Applicable>

**Company-specific description**

Micron operates in some countries where carbon taxes and greenhouse gas regulations apply or are under discussion, specifically Singapore, where the Carbon Pricing Act sets a tax of SGD $5 per tonne CO2e on a percentage of facility GHG emissions from 2019 to 2023. The estimated cost of SGD $8.5 million (approximately USD $6.2 million at average 2022 exchange rate). This would be a cost impact on our operations and may require additional reporting, planning, and/or time from designated personnel. Note that in CY2022, the total estimated tax is $6.2 million USD. Please refer to section C11 "Carbon Pricing" for details.

**Time horizon**

Short-term

**Likelihood**

Virtually certain

**Magnitude of impact**

Medium-low

**Are you able to provide a potential financial impact figure?**

Yes, a single figure estimate

**Potential financial impact figure (currency)**

6200000

**Potential financial impact figure – minimum (currency)**

<Not Applicable>

**Potential financial impact figure – maximum (currency)**

<Not Applicable>

**Explanation of financial impact figure**

This is an annual potential future financial cost, calculated by multiplying SGD $5 cost/CO2e established by the Singapore Carbon Pricing Act by the July 2023 exchange rate and by 80% of Micron’s current annual MTCO2e scope 1 emissions in Singapore.

**Cost of response to risk**

**Description of response and explanation of cost calculation**

Micron is taking action on our greenhouse gas emissions as a company in a way that is responsive to this risk. However, these actions are taken for a range of reasons not specifically related to this risk, and are not included in the cost of response to this risk.

**Comment**

Micron routinely monitors greenhouse gas and energy efficiency regulations and policy to understand and evaluate impacts to, and opportunities for, our business, customers, and the communities where we operate. Management activities are embedded into business-as-usual activities within the business and are therefore not additional.

Likelihood
Very likely

Magnitude of impact
Unknown

Are you able to provide a potential financial impact figure?
No, we do not have this figure
Micron realizes that there is potential for financial impact, the assessment of which is subject to a number of dynamic variables.

Micron routinely monitors conditions and potential impacts to, and opportunities for, our business, customers, and the communities where we operate. Management activities are embedded into business-as-usual activities within the business and are therefore not additional.

Micron operates in some countries where carbon taxes and greenhouse gas regulations apply or are under discussion, specifically Singapore, where the Carbon Pricing Act establishes that the carbon tax rate will be increased to SGD $25 per tonne CO2e , SGD $45 per tonne in 2026 and 2027, with a goal to reach SGD $50-80 per tonne by 2030. With Micron's approximately 1.8 million metric tons of Scope 1 emissions annually in Singapore, this has an estimated potential annual cost of SGD $36 million (US$27 million) in 2024-5, SGD $65 million (US$49 million) annually in 2026-7, and between SGD $72-115 million (US$54-87 million) annually by 2030 onward if emissions remain constant and are not reduced per Micron's new climate goals. This is likely to have a cost impact on our operations and may require additional reporting, planning, and/or time from designated personnel.

This is an annual potential financial cost, calculated by multiplying expected cost/tCO2e minimum (SGD $25 in 2024-5) and potential maximum (SGD $80 by 2030) established by the Singapore Carbon Pricing Act by the July 2022 exchange rate and by 80% of Micron's current annual Singapore tCO2e emissions.

Micron is taking action on our greenhouse gas emissions as a company in a way that is responsive to this risk. However, these actions are taken for a range of reasons not specifically related to this risk, and are not included in the cost of response to this risk. Overall management activities are embedded into business-as-usual activities within the business and are therefore not additional.

Micron routinely monitors greenhouse gas and energy efficiency regulations and policy to understand and evaluate impacts to, and opportunities for, our business, customers, and the communities where we operate.
**Primary potential financial impact**
Decreased revenues due to reduced production capacity

**Climate risk type mapped to traditional financial services industry risk classification**
<Not Applicable>

**Company-specific description**
Micron has manufacturing and other operations in locations subject to natural occurrences and possible climate changes, such as drought or other severe and variable weather resulting in increased costs, or disruptions to our manufacturing operations or those of our suppliers or customers. In addition, climate change may pose physical risks to our manufacturing facilities or our suppliers’ facilities, including increased extreme weather events that could result in supply delays or disruptions. If production is disrupted for any reason, manufacturing yields may be adversely affected, or we may be unable to meet our customers’ requirements and they may purchase products from other suppliers. This could result in a significant increase in manufacturing costs, loss of revenue, or damage to customer relationships, any of which could have a material adverse effect on our business, results of operations, or financial condition.

**Time horizon**

**Cost of response to risk**

**Description of response and explanation of cost calculation**
Micron routinely monitors conditions and potential impacts to, and opportunities for, our business, customers, and the communities where we operate. Management activities are embedded into business-as-usual activities within the business and are therefore not additional.

**Comment**
Micron also engages in local water restoration to mitigate its water risks. As an example, in Taiwan we have for many years been a steward of the Nankan and Dongmen rivers in Taoyuan, Taiwan, where in 2022 we donated $5 million for ammonia nitrogen removal and water quality improvement in the two rivers. We also donated nearly $10 million to help fund a dredging project that will restore storage capacity to the Shihmen Reservoir, the region’s primary water source.

**Opportunity type**
Resource efficiency

**Primary climate-related opportunity driver**
Use of more efficient production and distribution processes

**Primary potential financial impact**
Reduced indirect (operating) costs

**Company-specific description**
Micron has a year-on-year track record of implementing projects to improve the energy efficiency of our tools and systems, as well as replacing less efficient equipment with new equipment with higher energy efficiency when appropriate. Identified projects include:
- Manufacturing process efficiency improvement.
- HVAC optimization/upgrade to high efficiency including pressure optimization, make up air unit improvement, and exhaust balance/optimization.
- Replacement of lighting from fluorescent to LED light and installation of light sensors.
- Mechanical upgrades to higher efficiency motors, implementation of advanced control strategies, and optimization.
- Compressed Air system optimization including leak reduction, consumption optimization.
- Use of free cooling during winter season.
- Replacement of old equipment with high efficiency systems, including chillers, pumps, motors, fans.
- Various projects including mechanical upgrades, implementation of advanced control strategies, and optimization.
- Optimization of utilities consumption (power, CDA, heat).

We have taken this opportunity across our manufacturing operations to implement improvements that may have a substantive financial or strategic impact on our business.

Cost to realize opportunity

Strategy to realize opportunity and explanation of cost calculation
Micron routinely monitors market trends in terms of power consumption as well as other conditions and potential impacts to understand and evaluate impacts to and opportunities for, our business, our customers, and the communities where we operate. These and other management activities are embedded into business-as-usual activities and are not considered an additional cost specific to this opportunity.

Comment

C3. Business Strategy

C3.1
(C3.1) Does your organization’s strategy include a climate transition plan that aligns with a 1.5°C world?

Row 1

Climate transition plan
No, our strategy has been influenced by climate-related risks and opportunities, but we do not plan to develop a climate transition plan within two years

Publicly available climate transition plan
<Not Applicable>

Mechanism by which feedback is collected from shareholders on your climate transition plan
<Not Applicable>

Description of feedback mechanism
<Not Applicable>

Frequency of feedback collection
<Not Applicable>

Attach any relevant documents which detail your climate transition plan (optional)
<Not Applicable>

Explain why your organization does not have a climate transition plan that aligns with a 1.5°C world and any plans to develop one in the future
Micron’s transition plan includes specific goals that align with the objectives of the Paris agreement on climate change, including a net zero target for our scope 1 & 2 emissions by 2050 and 42% reduction in scope 1 emissions by 2030 vs. 2020. Our scope 2 alignment with a 1.5 degree C world is challenged by availability of renewable energy in certain operating locations, and we have a scope 3 target under development. We continue to review and strengthen our approach over time, including evaluation of how we might fully align with a 1.5 degree C world in the future.

Explain why climate-related risks and opportunities have not influenced your strategy
<Not Applicable>

C3.2

(C3.2) Does your organization use climate-related scenario analysis to inform its strategy?

<table>

<td>Physical climate scenarios RCP 4.5</td>
<td>Company-wide</td>
<td>Micron’s strategy, particularly its goals set in May 2022 to achieve net zero GHG emissions in scope 1 and 2 by 2050 as well as a 42% absolute reduction in scope 1 GHG emissions by 2030 from a 2020 baseline, has been informed by the Paris Agreement’s objective to limit global temperature rise to no more than 1.5°C. Additionally, the company has sought inputs on the potential impacts of climate change resulting from warming under business-as-usual, 2°C and 1.5°C scenarios.</td>
</tr>
</tbody>

C3.2b

(C3.2b) Provide details of the focal questions your organization seeks to address by using climate-related scenario analysis, and summarize the results with respect to these questions.

Row 1

Focal questions

Results of the climate-related scenario analysis with respect to the focal questions

C3.3
(C3.3) Describe where and how climate-related risks and opportunities have influenced your strategy.

| Products and services | Yes | Climate-related risks and opportunities have influenced Micron’s product and service strategy primarily as a result of existing and anticipated demand for low-power, energy-efficient memory and storage products. Low-power dynamic random access memory (LPDRAM) is an important product for many of our customers manufacturing servers, computers, cell phones, and other electronic equipment. We currently offer these products to customers and communicate with them about its benefits, and continue to invest in R&D to improve these products (see investment in R&D below) over the next several years. |
| Supply chain and/or value chain | Yes | Climate-related risks and opportunities have influenced Micron’s supply chain strategy in two primary ways. First, our supply chain Scope 3 emissions are significant and suppliers have climate-related risks that may affect Micron’s own business. Second, Micron’s capital equipment suppliers play a significant role in Micron’s energy use and emissions through the efficiency of the equipment they sell to Micron, and we expect these suppliers to develop and sell increasingly efficient equipment that helps Micron achieve our environmental goals. In both of these cases, we are expanding communication about these expectations to suppliers in CY2023, gathering relevant information, and evaluating suppliers based on their performance on these criteria. This evaluation has been expanded in CY2022-23 to include establishment of carbon reduction projects, and is included in Micron procurement decisions. |
| Investment in R&D | Yes | Micron’s investments in R&D are influenced by climate-related risks and opportunities in two key areas: manufacturing process development, and product development. In manufacturing processes, Micron’s Technology Development (TD) function establishes the processes used to manufacture future generations of Micron products. TD is investing in reducing GHG emissions and increasing energy efficiency of the processes that are being researched for high-volume manufacturing in the medium term (next 3.5 years) and long term (5 years plus). In product development, TD is investing in developing low-power memory and storage products to improve energy efficiency of electronic devices including computers, cell phones, and servers manufactured by our customers in the medium term (next 3.5 years) and long term (5 years plus). |
| Operations | Yes | Climate-related risks and opportunities have encouraged Micron to focus our operations strategy on developing and implementing significant environmental goals. Specifically, we have set medium-term and long-term (5 years plus) targets for a 42% absolute reduction in scope 1&2 GHG emissions by 2030 (vs. 2020), 100% renewable energy use in the U.S. by the end of 2025, and aspirational goals for a net zero scope 1&2 GHG emissions by 2050. We are supporting these goals with significant capital investment amounting to about $1 billion by 2028. |

(C3.4) Describe where and how climate-related risks and opportunities have influenced your financial planning.

| Financial planning elements that have been influenced | Description of Influence |
| Row 1 Capital expenditures | Situation: Micron’s performance regarding climate change, including our emissions reduction goals and performance as well as management of risks related to materials and water availability, influences growing number of Micron customers, investors, team members in their decisions to buy from, invest in, or work for the company. Task: In 2019, Micron determined that the company should take additional action so that we can continue to meet stakeholder expectations regarding emissions reduction and climate risk management. Action: In early 2020, Micron decided to invest about $1 billion over the next 5-7 years toward achieving a set of ambitious environmental goals. These long-term aspirational goals include a 40% absolute reduction in Scope 1&2 GHG emissions; adoption of 100% renewable energy where available; 100% water reuse, recycling, and restoration; and zero waste to landfill. Result: As a result of the decision to allocate capital expenditures toward environmental goals, Micron has been able to develop a prioritized list of investment projects that enable us to achieve a set of medium-term environmental targets by the end of 2023, including emissions reduction, energy efficiency, and water reuse projects designed to support the company’s time-bound goals of a 50% reduction in Scope 1&2 emissions per unit of production (vs CY18 base) by end of CY22, 75% reduction in Scope 1&2 emissions per unit of production (vs CY18 base) by end of CY30, and 100% renewable energy adoption in the U.S. by end of CY2025. |

(C3.5) In your organization’s financial accounting, do you identify spending/revenue that is aligned with your organization’s climate transition?

| Identification of spending/revenue that is aligned with your organization’s climate transition | Indicate the level at which you identify the alignment of your spending/revenue with a sustainable finance taxonomy |
| Row 1 Please select | <Not Applicable> |

(C4.1) Did you have an emissions target that was active in the reporting year?

| Absolute target | Intensity target |

(C4.1a) Provide details of your absolute emissions target(s) and progress made against those targets.

| Target reference number | Abs 1 |
Is this a science-based target?
Yes, we consider this a science-based target, but we have not committed to seek validation of this target by the Science Based Targets initiative within the next two years.

Target status in reporting year
New

Please explain target coverage and identify any exclusions
42% absolute reduction in scope 1 emissions by CY30 from the CY20 baseline.
This new goal is a first milestone that supports objectives of the Paris Agreement as we work toward targets to reach net zero GHG emissions in our operations (scope 1) and purchased energy (scope 2) by 2050.
These goals complement our target to achieve 100% renewable energy for existing operations in the U.S. by the end of 2025. They will also contribute to our original long-term climate target to reduce GHG emissions intensity by 75% per unit of production by CY30, compared with a CY18 baseline.

Plan for achieving target, and progress made to the end of the reporting year
Actions included in the plan for achieving the target: reducing direct emissions through efficient abatement of process GHGs and a transition to low global-warming-potential heat transfer fluid, reduction of indirect emissions through design of energy-efficient facilities, smart-controlled systems and transition to renewable electricity where available.
Progress in CY22: 6% increase in absolute scope 1 emissions in CY22 compared to CY20 due to production growth and construction. Yet, we started the execution of identified actions that mitigated the expected increase, and reduced annual increase to only 0.5% between CY21-CY22.

Target status in reporting year
Expired

Please explain target coverage and identify any exclusions
Target: reduce total Scope 1 and Scope 2 (market-based) emissions by 55% per unit of production by 2022 from 2018 levels. We achieved 52% intensity reduction. Micron plans to reduce the intensity indicator through the implementation of multiple emission reduction activities, like renewable energy procurement and reduction of process related emissions. In CY22, Micron continued to implement new energy savings projects, actions to increase Heat Transfer Fluids (coolants) use efficiency, installed additional abatement systems for process greenhouse gases by realizing Scope 1 and Scope 2 emissions reduction detailed in section 4.3b.

**Please explain target coverage and identify any exclusions**
Micron plans to adopt 100% renewable energy for its U.S. operations by the end of CY25.
Our renewable energy strategy includes a combination of green tariffs, physical and virtual power purchase agreements (PPAs), renewable energy credit (REC) purchase agreements.
We have a clear set of initiatives to aid in the use of renewable energy whenever possible, considering the availability of affordable renewable energy based on the unique landscapes in each country where we operate.

**Plan for achieving target, and progress made to the end of the reporting year**
In CY22, Micron achieved 100% renewable electricity in Malaysia and initiated onsite PPA (solar) in Singapore by achieving 2% of renewable energy out of total energy consumed in CY22.
While RE in US is 0% in the reporting year, negotiations to develop and procure new renewable energy in the United States continue, we have signed several renewable energy procurement agreements, and we expect first execution in 2023.
Micron is a member of the Clean Energy Buyers Association (CEBA), a membership association for large-scale energy buyers, developers, service providers and nongovernmental organizations.

Energy saving target, including fuel and purchased energy (electricity, steam, cooling), % emissions in scope and base year emissions are calculated as total Scope 2 (location based) and Scope 1 from fuel consumption (all energy related sources). Micron defined a multi-year goal to achieve at least 10% energy savings by 2022 compared to 2016 baseline year energy use.

With additional projects implemented in CY2022 (target year), we achieved a cumulative 12.5% energy savings compared to CY2016 total energy consumption (baseline) vs the goal of 10%.

Details of energy savings projects and associated CO2e savings are reported in section 4.3b.

Plan for achieving target, and progress made to the end of the reporting year
<Not Applicable>

List the actions which contributed most to achieving this target
We continue to improve energy efficiency, optimize compressed dry air (CDA) systems and chillers to improve efficiency.

We have been implementing system automation and installing control devices to reduce utility consumption during idle mode.

---

(C4.5) Do you classify any of your existing goods and/or services as low-carbon products?
Yes

C4.5a
(C4.5a) Provide details of your products and/or services that you classify as low-carbon products.

**Level of aggregation**
Group of products or services

**Taxonomy used to classify product(s) or service(s) as low-carbon**
Other, please specify (Power consumption by application)

**Type of product(s) or service(s)**

| Power | Other, please specify (electronic components) |

**Description of product(s) or service(s)**
Lower power usage and higher performance is the driver in the evolution of our entire product line. As an example, products for the mobile market require dense optimized power efficient solutions while memory and storage solutions for the compute centric markets drive more efficient workload management compared with alternate technologies. Energy efficiency is a key competitive advantage to our products and we will continue to be an integral part of the R&D, design and manufacture of our core products. While we continue to focus on energy efficiency in products both across the board and in specific categories such as low power DRAM, we are in the process of updating our definitions and do not currently have a specific revenue estimate for 2022.

**Have you estimated the avoided emissions of this low-carbon product(s) or service(s)**
No

**Methodology used to calculate avoided emissions**
<Not Applicable>

**Life cycle stage(s) covered for the low-carbon product(s) or services(s)**
<Not Applicable>

**Functional unit used**
<Not Applicable>

**Reference product/service or baseline scenario used**
<Not Applicable>

**Life cycle stage(s) covered for the reference product/service or baseline scenario**
<Not Applicable>

**Estimated avoided emissions (metric tons CO2e per functional unit) compared to reference product/service or baseline scenario**
<Not Applicable>

**Explain your calculation of avoided emissions, including any assumptions**
<Not Applicable>

**Revenue generated from low-carbon product(s) or service(s) as % of total revenue in the reporting year**

---

**C5. Emissions methodology**

**C5.1**

(C5.1) Is this your first year of reporting emissions data to CDP?
No

**C5.1a**

(C5.1a) Has your organization undergone any structural changes in the reporting year, or are any previous structural changes being accounted for in this disclosure of emissions data?

**Row 1**

Has there been a structural change?
No

Name of organization(s) acquired, divested from, or merged with
<Not Applicable>

Details of structural change(s), including completion dates
<Not Applicable>

**C5.1b**

(C5.1b) Has your emissions accounting methodology, boundary, and/or reporting year definition changed in the reporting year?

C5.3

(C5.3) Select the name of the standard, protocol, or methodology you have used to collect activity data and calculate emissions.
IPCC Guidelines for National Greenhouse Gas Inventories, 2006

C6. Emissions data

C6.1

(C6.1) What were your organization’s gross global Scope 1 emissions in metric tons CO2e?

Reporting year
Gross global Scope 1 emissions (metric tons CO2e)
3478449
Start date
<Not Applicable>
End date
<Not Applicable>
Comment
Micron Scope 1 emissions are related to process GHG gases (PFC, HFC, SF6, NF3, N2O), Heat Transfer Fluids, stationary fuel combustion, mobile fuel combustion (owned vehicles) and refrigerants.

C6.2

(C6.2) Describe your organization’s approach to reporting Scope 2 emissions.

Row 1
Scope 2, location-based
We are reporting a Scope 2, location-based figure
Scope 2, market-based
We are reporting a Scope 2, market-based figure
Comment
We are reporting both location-based and market based figures.
Location-based calculated by using the most recent factors published by relevant agencies for each location/country.
Market-based calculated using Supplier specific emission rates where applicable/available.
Whenever the market-based factor is not available we considered the location-based EF for the calculation of equivalent CO2 emissions.

C6.3
(C6.3) What were your organization’s gross global Scope 2 emissions in metric tons CO2e?

Reporting year
Scope 2, location-based
3864514

Scope 2, market-based (if applicable)
4132206

Start date
<Not Applicable>

End date
<Not Applicable>

Comment
Micron Scope 2 emissions include: purchased electricity, purchased steam, purchased cooling.

C6.4

(C6.4) Are there any sources (e.g. facilities, specific GHGs, activities, geographies, etc.) of Scope 1, Scope 2 or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure?
Yes

C6.4a

(C6.4a) Provide details of the sources of Scope 1, Scope 2, or Scope 3 emissions that are within your selected reporting boundary which are not included in your disclosure.

Source of excluded emissions
Non-manufacturing locations: sales offices and design centers, in multiple countries

Scope(s) or Scope 3 category(ies)
Scope 1
Scope 2 (market-based)

Relevance of Scope 1 emissions from this source
Emissions are not relevant

Relevance of location-based Scope 2 emissions from this source
<Not Applicable>

Relevance of market-based Scope 2 emissions from this source
Emissions are not relevant

Relevance of Scope 3 emissions from this source
<Not Applicable>

Date of completion of acquisition or merger
<Not Applicable>

Estimated percentage of total Scope 1+2 emissions this excluded source represents
0.5

Estimated percentage of total Scope 3 emissions this excluded source represents
<Not Applicable>

Explain why this source is excluded
Sales and design offices in America, Asia and Europe have multiple locations even within the same country. The most significant GHG source would be Scope 2 from purchased electricity consumption that is less than 1% of total Scope 2 emissions.

Explain how you estimated the percentage of emissions this excluded source represents
The above estimated percentage is calculated by using Scope 1 and 2 from non-manufacturing sites compared to manufacturing locations included in the reporting. Data collected for non-manufacturing sites include electricity consumption, fuel consumption and refrigerants where Micron has operational control.

C6.5

(C6.5) Account for your organization’s gross global Scope 3 emissions, disclosing and explaining any exclusions.
Purchased goods and services

Evaluation status
Relevant, calculated

Emissions in reporting year (metric tons CO2e)
2387737

Emissions calculation methodology
Hybrid method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
81

Please explain
Scope 3 emissions are calculated by using the annual spend CY22/supplier and emission intensity factor (tCO2e/mUSD) reported by the suppliers through CDP Supply Chain 2022. Where supplier specific data was not reported, emissions are calculated by using the relevant industry sector intensity average consolidated by CDP Supply Chain. The selected Purchased goods/services and Capital goods suppliers contribute to about 70% of total spend 2022. Percentage of data obtained from suppliers is calculated by considering emissions calculated from intensity emission factors reported by suppliers through CDP Supply Chain compared to total emissions. Contribution of suppliers impacting Scope 2 (such as electricity providers) and suppliers contributing to other Scope 3 categories (such as business travel and transportation/distribution) are not counted under this category to prevent double counting.

Capital goods

Evaluation status
Relevant, calculated

Emissions in reporting year (metric tons CO2e)
1213032

Emissions calculation methodology
Hybrid method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
92

Please explain
Scope 3 emissions are calculated by using the annual spend CY22/supplier and emission intensity factor (tCO2e/mUSD) reported by the suppliers through CDP Supply Chain 2022. Where supplier specific data was not reported, emissions are calculated by using the relevant industry sector intensity average consolidated by CDP Supply Chain. The selected Purchased goods/services and Capital goods suppliers contribute to about 70% of total spend 2022. Percentage of data obtained from suppliers is calculated by considering emissions calculated from intensity emission factors reported by suppliers through CDP Supply Chain compared to total emissions.

Fuel-and-energy-related activities (not included in Scope 1 or 2)

Evaluation status
Relevant, calculated

Emissions in reporting year (metric tons CO2e)
747018

Emissions calculation methodology
Average data method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
0

Please explain
This category includes upstream emissions from purchased fuels and electricity, including generation, transmission & distribution (T&D) and any other losses. Emissions due to fuel and energy related activities are calculated by using actual fuel and electricity consumption in CY2022 along with latest UK DEFRA emission factors published in April 2023 for fuel and steam, while for purchased electricity WTT and T&D factors UK DEFRA 2019

Upstream transportation and distribution

Evaluation status
Relevant, calculated

Emissions in reporting year (metric tons CO2e)
147115

Emissions calculation methodology
Hybrid method

Percentage of emissions calculated using data obtained from suppliers or value chain partners
41

Please explain
Included upstream transportation of: purchased goods, capital goods, transfer of products/materials between Micron sites. Data source: emissions reports from suppliers where available, remaining calculated from Micron report with activity data (by carrier, transportation mode, total kg/distance). Emission factors source: US EPA for ground and ocean transportation mode (updated version 18 April 2023) and UK DEFRA for Freight Flights (version 2022) Emissions from outbound logistics services (reported as downstream transportation/distribution previously) have been included in this upstream category because outbound services are also paid by Micron (GHG Protocol guideline for Corporate Value Chain, page 44)
Waste generated in operations

Emission status: Relevant, calculated

Emissions in reporting year (metric tons CO2e): 7555

Emissions calculation methodology: Average data method

Percentage of emissions calculated using data obtained from suppliers or value chain partners: 0

Please explain: Calculated CO2 emissions based on tonnage of CY2020 hazardous and non-hazardous waste sent to incineration (with and without energy recovery), recycle, landfill, composting, chemical treatment. Significant reduction of waste sent to Landfill compared to 2021, driving emissions down. Sources of emission factors: UK DEFRA Waste disposal (2022)

Business travel

Emission status: Relevant, calculated

Emissions in reporting year (metric tons CO2e): 14891

Emissions calculation methodology: Supplier-specific method

Percentage of emissions calculated using data obtained from suppliers or value chain partners: 100

Please explain: Emissions from business travel (including flights, hotel, and car rentals) are calculated using actual data that is tracked and reported by Micron's travel agencies based on actual CY2020 business travels data. GHG emissions are then calculated by using EPA emission factors. 2022 emissions higher as a consequence of relaxed travel restrictions post COVID-19.

Employee commuting

Emission status: Relevant, calculated

Emissions in reporting year (metric tons CO2e): 1563

Emissions calculation methodology: Fuel-based method

Percentage of emissions calculated using data obtained from suppliers or value chain partners: 100

Please explain: Emissions from the commuter buses used by our employees in Singapore, Japan, Taiwan and China. Transportation vendors provided distance/fuel consumption data for all relevant locations. Emissions calculated by using fuel consumption in CY2022 as provided by the bus service providers, source of emission factors for relevant fuels EPA 2022 update.

Upstream leased assets

Emission status: Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e): <Not Applicable>

Emissions calculation methodology: <Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners: <Not Applicable>

Please explain: Micron does not have relevant leased asset for the reporting year
Downstream transportation and distribution

Evaluation status
Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
In completing a Scope 3 screening and inventory, we have determined that emissions from outbound logistics services (reported as downstream transportation/distribution previously) have to be included in the “Upstream transportation and distribution” category because outbound services are paid by Micron (GHG Protocol guideline for Corporate Value Chain, page 44). Total emissions from distribution and transportation upstream and downstream are then reported in “Upstream transportation and distribution”.

Processing of sold products

Evaluation status
Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)
<Not Applicable>

Emissions calculation methodology
<Not Applicable>

Percentage of emissions calculated using data obtained from suppliers or value chain partners
<Not Applicable>

Please explain
As per WBCSD/WRI Greenhouse Gas Protocol (GHGP), “If the eventual end use of sold intermediate products may be unknown, companies may disclose and justify the exclusion of downstream emissions from categories 9, 10, 11, and 12 in the report.” In completing a scope 3 screening and inventory, we have determined that our sold products should be classified as ‘intermediate products’ per the GHGP because Micron does not sell any finished/ final products and it is very difficult to estimate the processing, end use and end of life treatment of our products given the range of application types and products which use memory and storage. Thus, we have determined that categories 9, 10,11 and 12 are not relevant for Micron.

Use of sold products

Evaluation status
Not relevant, explanation provided

Emissions in reporting year (metric tons CO2e)
<Not Applicable>

C6.7

(C6.7) Are carbon dioxide emissions from biogenic carbon relevant to your organization?
No
C6.10

(C6.10) Describe your gross global combined Scope 1 and 2 emissions for the reporting year in metric tons CO2e per unit currency total revenue and provide any additional intensity metrics that are appropriate to your business operations.

Intensity figure
0.00028

Metric numerator (Gross global combined Scope 1 and 2 emissions, metric tons CO2e)
7610655

Metric denominator
unit total revenue

Metric denominator: Unit total
27156000000

Scope 2 figure used
Market-based

% change from previous year
12

Direction of change
Increased

Reason(s) for change
Change in output
Change in revenue

Please explain
Main driver of the increased intensity figure is the significant decrease in revenue compared to last year. Note that the unit total revenue in the metric denominator reflects Micron’s fiscal Q2 2022 through fiscal Q1 2023 (that is, December 2021 through November 2022) as the audited fiscal data that comes closest to reflecting the time period of the environmental data reported in this questionnaire, representing a very small (est <1% difference) from full calendar revenue.

C7. Emissions breakdowns

C7.1

(C7.1) Does your organization break down its Scope 1 emissions by greenhouse gas type?
Yes

C7.1a

(C7.1a) Break down your total gross global Scope 1 emissions by greenhouse gas type and provide the source of each used greenhouse warming potential (GWP).

<th>January 1 2022</th>
</tr>
</thead>
<tbody>
<tr>
<td>Period end date</td>
<td>December 31 2022</td>
</tr>
<tr>
<td>% of total Scope 1 emissions covered by tax</td>
<td>79</td>
</tr>
<tr>
<td>Total cost of tax paid</td>
<td>6200000</td>
</tr>
</tbody>
</table>

Comment

Singapore Carbon Tax applies to Micron manufacturing sites in Singapore and first year of application was calendar year 2019. Sites shall report emissions by June every year.

In calendar year 2022, 79% of total greenhouse gas emissions reported to Singapore authority (NEA) is taxable under the Carbon Pricing Act.

Tax amount will be confirmed by the National Environmental Agency after the review and approval of the emission report. Total cost of tax (estimated 8.5M SGD) will be paid by September 2023 in Singapore dollars. Total cost reported above is estimated based upon Carbon Pricing at SGD $5/ tCO2e and average exchange rate in 2022.

Emissions sources within scope and accounting/calculation methodology differ from Micron GHG inventory.

C11.1d

(C11.1d) What is your strategy for complying with the systems you are regulated by or anticipate being regulated by?

Affected Micron sites started an assessment since the proposed rule was issued and evaluated cost impact and possible reduction solutions.

There is a dedicated multi-disciplinary team working on identifying opportunities to reduce emissions (and thus GHG emissions taxes) and establish the execution plan by prioritizing actions that have the most significant impact. Micron has been working on optimizing the use of process gases and install additional dedicated abatement units in our manufacturing sites in Singapore. This effort will help with reducing process emissions covered by the carbon tax.

C11.2
(C11.2) Has your organization canceled any project-based carbon credits within the reporting year?
No

(C11.3) Does your organization use an internal price on carbon?
No, and we do not currently anticipate doing so in the next two years

C12. Engagement

C12.1

(C12.1) Do you engage with your value chain on climate-related issues?
Yes, our suppliers
Yes, our customers/clients
### C12.1a

Provide details of your climate-related supplier engagement strategy.

**Type of engagement**

Information collection (understanding supplier behavior)

**Details of engagement**

Other, please specify (Collection of Emissions data, targets, risks and opportunities through CDP Supply Chain)

**% of suppliers by number**

3

**% total procurement spend (direct and indirect)**

70

**% of supplier-related Scope 3 emissions as reported in C6.5**

100

**Rationale for the coverage of your engagement**

Micron began piloting information collection from suppliers in early 2020, and joined CDP’s supply chain program in early 2021. We chose large, strategic suppliers that have the potential for significant greenhouse gas emissions that may contribute to Micron’s upstream Scope 3 emissions. CDP conducted outreach to suppliers and shared completed questionnaires with Micron. Micron reviewed responses and engaged with suppliers based on completeness and accuracy of response. We used data collected through CDP Supply Chain to calculated category 1 and 2 of Scope 3 for Calendar Year 2022, direct data from suppliers for Transportation and Distribution/Business Travel/Employee Commuting. We have expanded the number of suppliers included in the Supply Chain program 2023 compared to last year and expect to see improved data quality and completeness. 100% of scope 3 emissions are related to suppliers’ goods and services (100% upstream emissions)

**Impact of engagement, including measures of success**

Measures of success include total number and percent of suppliers engaged, response rate, and number that improve their performance because of Micron’s engagement. Total number of suppliers engaged through CDP’s supply chain program in 2022 was 112 (compared to 67 in 2021), with response rate of 84% (compared to 79% of previous year)

**Comment**

Improved response rate and quality of the data compared to last year, despite the significantly increased number of suppliers engaged.

---

### C12.1b

**Type of engagement**

Innovation & collaboration (changing markets)

**Details of engagement**

Run a campaign to encourage innovation to reduce climate impacts on products and services

Other, please specify (Engage with suppliers to encourage deployment of projects to reduce their GHG emissions)

**% of suppliers by number**

3

**% total procurement spend (direct and indirect)**

70

**% of supplier-related Scope 3 emissions as reported in C6.5**

100

**Rationale for the coverage of your engagement**

This engagement covers our largest suppliers of capital equipment and purchased goods and services, whose products play a key role in Micron’s greenhouse gas emissions and energy use. Projects and progress have been reviewed during annual supplier business review and responses are scored on their products’ support of Micron’s aspirational environmental goals, including greenhouse gas emissions and energy efficiency goals, as well as whether they have adopted GHG emissions reduction projects. Micron use this score as a component of the sustainability portion of scorecards provided regularly to suppliers.

**Impact of engagement, including measures of success**

Measures of success include projects progress and completion, and calculated reductions in greenhouse gas emissions and energy use based on these engagements. We have measured reductions in GHG emissions based on these engagements.

**Comment**

Direct and indirect suppliers have been targeted for engagement.
(C12.1b) Give details of your climate-related engagement strategy with your customers.

**Type of engagement & Details of engagement**

| Education/information sharing | Run an engagement campaign to educate customers about your climate change performance and strategy |

**% of customers by number**

**% of customer-related Scope 3 emissions as reported in C6.5**

Please explain the rationale for selecting this group of customers and scope of engagement

We routinely share information with our customers about Micron's products and performance including climate and sustainability performance, and meet with key customers to discuss this information and understand how we are performing from their perspective. Cross-functional teams review the outcomes of those conversations, as well as written customer requirement documents, and assess opportunities for improvement. A semi-monthly meeting of executives, senior leaders and subject leads drives accountability for the improvements we undertake in response to key customer expectations and requirements. We also engage in several industry organizations (such as SEMI, Responsible Business Alliance, the Semiconductor Industry Association, Clean Energy Buyers Association, and others) alongside our customers, building consensus across a range of social and environmental issues specific to our industry, including on climate-related matters. Additionally, our System Power Calculator is an online tool available to our customers to help them estimate memory power requirements when making important system and architecture and design decisions. This information helps our customers make choices that can influence the overall energy footprint of the end devices our products enable. The % of customer-related scope 3 is not applicable - emissions from the use of our products in the final applications is not relevant (refer to 6.5 for explanation)

**Impact of engagement, including measures of success**

Measures of success include percentage of key customers engaged (estimated at 90%, as noted above), and percentage of low-power products in Micron's sales mix. We recognize that the energy demand of our products contributes to the global environmental impact of technology. This is why we partner with our customers to deliver memory solutions that meet tightening requirements and expectations for energy efficiency.

---

(C12.2) Do your suppliers have to meet climate-related requirements as part of your organization’s purchasing process?

No, but we plan to introduce climate-related requirements within the next two years

---

(C12.3) Does your organization engage in activities that could either directly or indirectly influence policy, law, or regulation that may impact the climate?

**Row 1**

External engagement activities that could directly or indirectly influence policy, law, or regulation that may impact the climate

Yes, our membership of engagement with trade associations could influence policy, law, or regulation that may impact the climate

Does your organization have a public commitment or position statement to conduct your engagement activities in line with the goals of the Paris Agreement?

No, and we do not plan to have one in the next two years

Attach commitment or position statement(s)

<Not Applicable>

Describe the process(es) your organization has in place to ensure that your external engagement activities are consistent with your climate commitments and/or climate transition plan

We review policy and industry association stances internally with relevant sustainability and executive leadership as needed, taking into account consistency with our climate commitments.

Primary reason for not engaging in activities that could directly or indirectly influence policy, law, or regulation that may impact the climate

<Not Applicable>

Explain why your organization does not engage in activities that could directly or indirectly influence policy, law, or regulation that may impact the climate

<Not Applicable>

---

(C12.3b)
(C12.3b) Provide details of the trade associations your organization is a member of, or engages with, which are likely to take a position on any policy, law or regulation that may impact the climate.

**Trade association**
Other, please specify (Clean Energy Buyers Association)

**Is your organization’s position on climate change policy consistent with theirs?**
Consistent

**Has your organization attempted to influence their position in the reporting year?**
Yes, we publicly promoted their current position

**Describe how your organization’s position is consistent with or differs from the trade association’s position, and any actions taken to influence their position**

**Funding figure your organization provided to this trade association in the reporting year (currency as selected in C0.4)**

**Describe the aim of your organization’s funding**
<Not Applicable>

**Have you evaluated whether your organization’s engagement with this trade association is aligned with the goals of the Paris Agreement?**
Yes, we have evaluated, and it is aligned

**Trade association**
Other, please specify (Semiconductor Industry Association)

**Is your organization’s position on climate change policy consistent with theirs?**
Consistent

**Has your organization attempted to influence their position in the reporting year?**
Yes, we publicly promoted their current position

**Describe how your organization’s position is consistent with or differs from the trade association’s position, and any actions taken to influence their position**
Micron is an active member of the Semiconductor Industry Association (SIA) representing the semiconductor industry. SIA and its members have been engaged in ongoing proactive efforts to reduce industry GHG emissions. SIA and its members have participated in the efforts of the World Semiconductor Council (WSC) to voluntarily reduce emissions of PFC since 1995 by continuously implementing best practices for new semiconductor fabs and expansions to existing fabs. While PFCs are a continued focus of the WSC, the WSC has a goal of expanding its efforts to broader GHG emissions reductions. WSC and SIA members commitment is in line with Micron’s GHG emissions reduction goal.

**Funding figure your organization provided to this trade association in the reporting year (currency as selected in C0.4)**

**Describe the aim of your organization’s funding**
<Not Applicable>

**Have you evaluated whether your organization’s engagement with this trade association is aligned with the goals of the Paris Agreement?**
Yes, we have evaluated, and it is aligned
(C12.4) Have you published information about your organization’s response to climate change and GHG emissions performance for this reporting year in places other than in your CDP response? If so, please attach the publication(s).
