Leading Innovation in Singapore

Micron's globally diversified footprint is designed to maintain a streamlined and cost competitive supply chain while bringing together some of the world's brightest talent to work on our most advanced memory technologies.

Our Singapore site, comprised of two wafer fabrication facilities and one assembly and test facility, serves as the base for our worldwide operations. With over 500,000 square feet of cleanroom space, the location is also our designated NAND Center of Excellence, driving the implementation of the company's leading-edge 3D NAND production for use in mobile phones, solid-state drives, digital cameras and more.

Supporting Our Global Communities

Maintaining a successful global footprint includes a dedication to sustainable manufacturing practices and a commitment to supporting the communities where our team members work and live. We consistently look for new ways to reduce our impact on the environment in a range of areas including water management, energy efficiency, and recycling. Through the Micron Foundation, we promote science and engineering education to children around the world and address basic human needs through our grants, programs, and volunteer efforts.
